The Hawaii-based pelagic longline fishery targeting tunas has been monitored under a mandatory observer program since February 1994. Beginning March 1994, branch personnel have conducted daily shoreside dock rounds in Honolulu to determine which fishing vessels are in port. These dock rounds are used to obtain an estimate of fishing effort on a real-time basis by assuming that a vessel is fishing when it is absent from the harbor. This report summarizes data for vessels that declared intent for a deep set trip. This report is used to ensure prompt dissemination of Hawaii Longline Observer Data and may be revised after final data editing has been completed. The following table summarizes the percent observer coverage for vessels departing, vessels arriving with observers, and protected species interactions for vessels arriving with observers during the first quarter of 2012.

### Vessel Departures - 1st Quarter (January 1, 2012 - March 31, 2012)

- Departures: 334

### Protected Species Interactions - 1st Quarter

- Vessels arriving with observers - 1st quarter: 71
- Trips with turtle interactions: 0

Note: The percent of observer coverage is based on vessel departures. Protected species interactions are based on vessel arrivals. For the purpose of this report, an animal that becomes hooked or entangled is an interaction.
